## **White Paper from Semaphore Describes Remote Site Technology for Infrastructure Management**

NASHUA, NEW HAMPSHIRE – February 18, 2009 – Semaphore, a CSE Global company, has released a white paper with updated information on [RTU](#) and [SCADA system](#) architecture for [infrastructure management](#) and [mobile asset management](#) applications.

Often overlooked in a “top-down,” infrastructure management system design, a remote terminal unit (RTU) can play a critical role in [managing remote sites](#). This technical paper focuses on remote site equipment and the numerous advantages an RTU offers to the solution.

An RTU solves the problem introduced by contention among the priorities of remote site automation, monitoring and telemetry. In many cases, the engineering team will select a device that is suitable for one of these roles and end up with a considerable integration project to accommodate either or both of the others. See how the RTU solution can cost-effectively provide all the desired functionality in a single, integrated package.

The white paper is available on the Semaphore website, [www.cse-semaphore.com](http://www.cse-semaphore.com).

### **About Semaphore**

Established in 2006, [Semaphore](#) was the result of a merger of two CSE Global companies, RTUnet, of Australia, and TechnoTrade SA, of Belgium. For over 20 years, these companies have provided leading solutions for telemetry, automation, and remote monitoring and have an installed base of more than 70,000 devices. For more information, visit [www.cse-semaphore.com](http://www.cse-semaphore.com).

Semaphore is a wholly owned subsidiary of CSE-Global Limited (CSE), a Singapore-based, industrial integration, manufacturing and distribution group with locations in 20 countries. CSE

employs more than 1,000 people worldwide, with over 85% representing its design, engineering, and project management capability and experience. For more information, visit [www.cse-global.com](http://www.cse-global.com).
